SUMMARY

AI/ML and Full-Stack Software Engineer with hands-on experience building GenAI-driven solutions for enterprise settings. Developed automated React front-ends for Citi's observability platform, integrated AI-powered data pipelines, and enhanced LLM capabilities to streamline workflows and improve decision-making. Optimized search relevance models and engineered training datasets for NLP systems at TELUS International, strengthening accuracy and performance. Looking to leverage practical development and AI expertise to create smart, impactful software products that drive real-world results.

EXPERIENCE

Citi | *Software Engineer, Observability Platform*

Oct 2022 - Present

- Leveraged GenAI to engineer React front-ends for automation questionnaires and integrated Grafana APIs to automate creation of teams, folders, and data sources, reducing manual setup effort and speeding up onboarding
- Spearheaded the registration and configuration of Model Context Protocol (MCP) servers for Citi AI, enhancing LLM capabilities within the enterprise environment.
- Architected enterprise-scale Observability data pipelines on OpenShift with Cribl Stream to ingest, transform, and route metrics, logs, and traces to GCP and on-prem destinations, improving telemetry availability and reducing processing latency
- Configured Cribl Stream processing engines to execute complex data transformations, including enrichment, redaction, and reduction, ensuring OTEL and Citi JSON schema compliance across GCP Monitoring, Logging, and Trace.
- Orchestrated seamless system upgrades for OpenShift-hosted Grafana instances for 30k+ users and 600 teams, ensuring zero downtime and 99.9% platform availability.
- Led a 15-member L0 contractor team, managing ~200 tickets monthly and ensuring 100% SLA compliance (24hr low impact / 72hr high impact) through structured knowledge transfers.
- Developed an automated chargeback billing system for Grafana and GEM usage, accurately attributing costs on \$3/active user and \$3/10k metrics to optimize cloud spend.
- Automated credential rotation for 30+ PostgreSQL systems via Python and CyberArk Vault APIs, achieving 100% compliance on internal security audits.
- Built real-time visualization tools by developing custom OpenShift pods to pull data from Grafana APIs into executive-level leadership dashboards.
- Engineered a lightweight JavaScript/HTML/CSS front-end UI for self-service data source creation, saving 100+ engineering hours per week.
- Authored 20+ technical documentation guides in Confluence, reducing ticket volume by 80% and streamlining onboarding and support processes.
- Migrated 6 legacy Grafana VM instances to optimized OpenShift containers, maintaining 99.9% uptime during the transition.
- Collaborated in Agile sprints (JIRA), maintaining 95% completion across 12+ releases, focusing on software automation and internal dashboarding.

TELUS International AI Data Solutions | *AI Search Relevance Analyst*

Jul 2021 - Jun 2022

- Optimized search engine algorithms by analyzing and rating web results, supplying ground-truth data that boosted supervised learning models, leading to higher search ranking accuracy and increased user satisfaction.
- Engineered training datasets for NLP models by labeling complex search entries, improving precision of AI advertising products
- Ensured model integrity by maintaining 98%+ accuracy on quality assurance evaluations, contributing to the iterative tuning and performance enhancement of large-scale AI systems.

EDUCATION

University of Texas at Austin | *Postgraduate Certificate, Artificial Intelligence & Machine Learning*

Flatiron School | *Certificate, Software Engineering*

Baylor University | *Bachelor of Science (BS), Biology*

SKILLS

- Python, JavaScript, SQL, HTML, CSS, Ruby, React, Redux, Node.js, Ruby on Rails, TensorFlow, PyTorch, Scikit-learn, Pandas, Supervised Learning, Model Evaluation, LLM Tuning, Classification/Regression, Neural Networks, Data Labeling, Git, GitHub, REST APIs, OpenShift, JIRA, Confluence, Grafana, Google Cloud Platform (GCP), Cribl Stream, Prometheus, OTEL, SIEM, Splunk, Elasticsearch, Front-End Architecture, Responsive Design, UI/UX, Authentication Systems, Agile Development, Technical Writing, Team Collaboration
